SMART MESH NEBULIZER AGU SN10

saving and analyzing all data in the AGU App

IntelliFlow Technology – medicine nebulizing control during inhalation

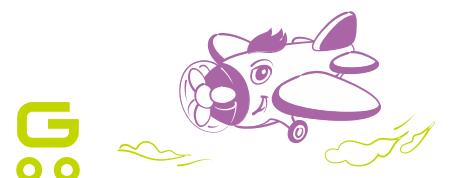

The **AGU Smart Mesh Nebulizer** is a revolutionary nebulizer that combines the benefits of a mesh technology with the possibility to record treatment data. It is easy to store and share data such as: how many times an inhalation had been performed, the type of medication used, and the amount of medication that had been taken.

The **Smart Mesh Nebulizer AGU SN10** detects the cycle of inhalation and exhalation and sprays medicine only as the patient inhales. It is possible to set up three speeds of spraying.

Parents can set up reminders about inhalation. In addition, the device signals that medicine in the tank is running out.

The **Smart Mesh Nebulizer AGU SN10** allows parents to follow medical prescriptions quickly, easily and accurately. Nebulizer therapy becomes absolutely effortless for any small patient.
