The **AGU Electric Kettle Bubbly** combines all operations needed to prepare healthy baby food. This all-in-one product combines several useful functions: preheating the water for a baby formula preparation, reheating baby food, steam cooking, warming prepared baby bottles, sterilizing bottles and nipples, and boiling water.

The **AGU Kettle Bubbly** is very useful for new parents as it will not overload the kitchen space with the many other single-function devices that may otherwise be required.
