Tomchi

THE AGU MESH NEBULIZER

quiet and discreet

compact & portable size

automatic switch off in case of lack of medicine

micro USB operation

Children do not like to sit still for too long and the loud noise from compressor nebulizers can scare them.

With **The AGU Mesh Nebulizer Tomchi**, children will like to do their inhalations and they can hold the device themselves.

Nebulizer Tomchi AGU is specifically designed to cure catarrhal diseases of the respiratory tract in children. The aerosol particle size (MMAD) of 4–5 μm allows the medicine to act directly on the diseased sites that are localized in the trachea and bronchi.

Its nebulization rate (over 0.35 ml/min) helps to carry out the procedure faster than usual; a child can easily undergo an inhalation within the short timeframe. This lightweight, silent and compact nebulizer will be your handy helper in health around your home and when travelling.
